

**Case Study no. 25****Local Artisan Bulk Buying Club**

Topic: Marketplace – Collective Purchasing

Problem Statement:

Independent households often want handmade products but individual shipping costs make small orders expensive. CraftCircle proposes a buying club where members combine orders from local artisans. A typical combined order is ₹12,000 and logistics cost falls from ₹1,800 individually to ₹700 when consolidated. The group must design membership, order windows and supplier coordination.

Objectives:

- Identify buyers and shipping-cost pain points.
- Design the discovery, pooled-order and delivery journey.
- Choose essential membership, catalogue and order-cutoff features.
- Suggest two ways to acquire early members.

Outcomes:

- Understand collective purchasing and marketplace value.
- Connect demand aggregation with supplier and logistics planning.
- Apply basic logistics-cost comparison.

Case Questions & Tasks

- Identify the core customer problem and convert it into a clear problem statement and opportunity statement.
- Define the target customer segment(s), create a customer profile and prepare a simple Value Proposition Canvas.
- Design the end-to-end customer journey and identify the important operational or service touchpoints.
- Design the relevant supply-chain or operating flow from sourcing/input to final customer delivery, including key responsibilities.
- Identify the main revenue streams, costs and at least one simple financial or performance measure; perform the basic calculation required by the case.
- Prepare a SWOT analysis and identify at least five relevant risks with practical mitigation measures.
- Recommend a suitable business model/go-to-market approach and outline a 90-day pilot-to-scale plan with measurable success criteria.

Deliverables:

- 4–5 page business report.
- Business Model Canvas.
- Supply Chain.
- 6-slide presentation.
- Demo.
